Naturalake Biosciences Case Study

Aquatic Midge Control with AQUABACxt

Bill Tomlinson

SIZE: 1 acre

LOCATION: Florida

ISSUE: Midge Fly Swarming

SOLUTION: AQUABAC[®]xt

RESULTS: 88.6 % control 22 DAT

OVERVIEW:

Swarms of the non-biting phantom midge (Order: Diptera, Family: Chaoboridae) became a major nuisance for residential homeowners at the Preserve in Ponte Vedra Beach, Florida, beginning in the spring of 2022. The source of these infestations was one of the two community stormwater ponds, both of which were built in 2016.

Above: Pictures of living (before) and dead *Chaoborus* midges (after) the AQUABAC[®]xt treatment.

Swarming around Pond #1 restricted recreational activities and back patio use in the evenings. Efforts to control *Chaoborus* midges were immediately put in place with a local lake management company, The Lake Doctors, Inc., which recommended treating with AQUABAC[®]xt (supplied by Naturalake Biosciences), a Bio larvicide with *Bacillus thuringiensis* var. *israelensis* (Bti) being the active ingredient. Bti is considered an environmentally friendly alternative to chemical pesticides since it is highly specific to nuisance mosquitos, blackflies, aquatic midges, and flies and has no toxicity to humans.

The larvicide application was made on May 17th, 2022, on Pond #1 with larvae counts being performed using a 6-inch square bottom sampler before and after treatment (n=5) in both Pond #1 and in a nearby reference Pond #2. The label rate for midge fly control using liquid AQUABAC[®]xt was followed at 1.0 gallons/acre (3.80 liters/acre) and applied to Pond #1. An 88.6 % decrease in larval counts 22 days after treatment was observed in Pond #1 with no living *Chaoborus* midges being found. The non-treated reference Pond #2 had an increase in larval counts by 18.5% with all larvae found to be alive. Stakeholders reported recreational activities were no longer hindered just days after the treatment. AQUABAC[®]xt can be used to effectively control *Chaoborus* midges.
